

T2 Flex is a single, unified system for parking management, enforcement, permits, as well as access and revenue control. T2 Flex is the authoritative data source for everything related to parking, providing a unified platform that streamlines all parking tasks including: accounts receivable, residential and other permits, access cards, citations, towing, monthly contract parking, event management, reservations and validations. It allows you to manage any and all parking-related data, providing centralized control, management, reporting and operation of all sub-systems from one portal.

Parkmobile Pay-by-Cell Integration

As today's parkers become more sophisticated, many are using their cell phones to locate and pay for available parking. Pay-by-Phone (or Pay-by-Cell) is a fast growing payment option and a low-cost addition to a parking operation, requiring no changes to the parking infrastructure. In addition, Pay-by-Phone is highly desired by parkers, enabling them to quickly pay for parking and receive text messages notifying when parking expires.

Just like with other parking areas, parking operations enforce Pay-by-Phone areas using a handheld device to "audit" vehicles and license plates. Because parking officers need to know instantly if a vehicle or parking space has been paid, Pay-by-Phone enforcement is dependent on real-time wireless access to the internet. Currently, officers can use any wireless-enabled browser to perform a lookup of license plate or space information, however this information doesn't automatically transfer to the citation; the officer must re-enter this same information on a handheld ticketwriter or on a handwritten ticket.

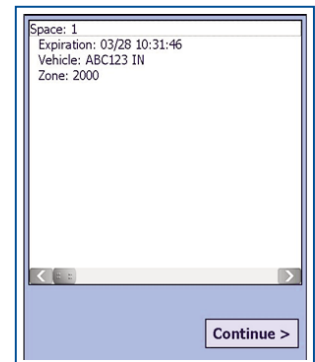

T2 Systems has partnered with Parkmobile, a leading provider of Pay-by-Phone applications, to offer an easy enforcement solution that allows officers to move effortlessly from the information provided in the Pay-by-Phone application to citation issuance. Because this new feature integrates seamlessly with T2's handheld citation process, officers can enforce Pay-by-Phone without using a secondary device to perform lookups. All lookups are integrated within the T2 handheld and populate directly into our current Pay-by-Space or citation issuance applications, in real-time and without any additional keystrokes.

How Does It Work?

This new feature is specifically for parking operations – such as university campuses, municipalities, hospitals and medical facilities, or private operator managed operations - that already offer, or are interested in offering Parkmobile Pay-by-Phone technology to their patrons. The Parkmobile service allows parkers to pay for their parking fees via their cell phone and Parkmobile account. The parker will need to have an existing Parkmobile account in advance of using this payment option.

Using a wireless connection, the handheld connects to Parkmobile's server to retrieve real-time data about payments processed through Parkmobile, helping an enforcement officer determine which meters and stalls have been paid for by parkers using a cell phone. The officer simply selects the appropriate zone and refreshes the application screen, eliminating the need to enter data before being informed of paid spaces. For each zone selected, the handheld automatically retrieves current parking information from the Parkmobile server. The handheld quickly presents information about the plate and or space. The application can also provide a graphic display of all space numbers or license plates currently in a paid, expiring, or expired status. From here the officer can choose to write a parking ticket for expired payments or return to the menu.

This solution can also operate in a single space meter or Pay & Display Machine environment by seamlessly checking for Parkmobile payments via the T2 citation wizard. When enabled, an enforcement officer has the option of simply entering a vehicle license plate number and the application will automatically check Parkmobile for payments related to that vehicle LPN. The enforcement officer can then use this information to make the proper decisions based on real-time payment information.

Payment rights received through the T2 citation wizard in a single space operation

Any operation using the Parkmobile Pay-by-Phone solution can now enforce designated areas in a quick, efficient manner. And operations using both Pay-by-Phone (from Parkmobile) and Pay-by-Space technology (from Digital Payment Technologies) will benefit the most from this integration. These locations will have the ability to pull all payments, whether Pay-by-Space or Pay-by-Phone.

With an easy enforcement process, parking officers will no longer miss out on revenue from citations. This efficiency, along with the important statistical information available about parking locations, durations, and demand, make Pay-by-Phone a popular, cost-effective solution for today's parking operations.

| Space # | Expires At | Refresh | Help |
|---------|----------------------------------|---------|------|
