

T2 Flex is a single, unified system for parking management, enforcement, permits, as well as access and revenue control. T2 Flex is the authoritative data source for everything related to parking, providing a unified platform that streamlines all parking tasks including: accounts receivable, residential and other permits, access cards, citations, towing, monthly contract parking, event management, reservations and validations. It allows you to manage any and all parking-related data, providing centralized control, management, reporting and operation of all sub-systems from one portal.

Pay-by-Space Integration

Enforcement of pay-by-space systems is currently a labor-intensive activity. One parking lot may be served by multiple pay-by-space machines and the enforcement officer must visit each machine, produce a print-out of current space utilization, and then walk through the lot to compare actual occupancy with the printout. During this time, parkers come and go and the printout becomes outdated.

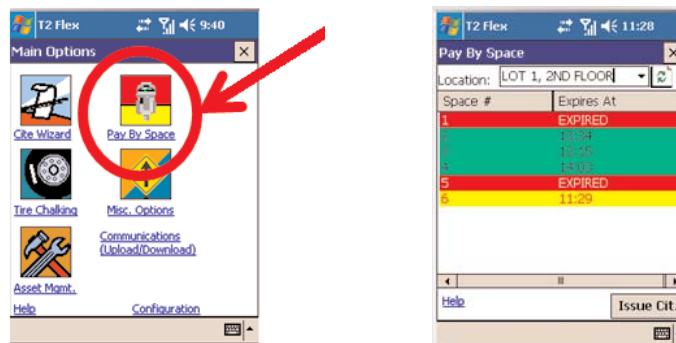

T2 Systems has partnered with Digital Payment Technologies (DPT), a leading provider of electronic parking meters, to offer a solution that will help enforcement officers become more productive and increase citation collections. The integration of T2 Flex handheld software and DPT's popular LUKE and SHELBY pay stations allows officers to enforce parking rules and issue citations without having to visit each pay station to get a list of paid and unpaid spaces.

Now, centralized management of pay stations can be done over the Internet through DPT's web-based EMS application. Officers will be able to retrieve data from DPT's central server over a wireless connection, allowing them to see space occupancy and payment information within the T2 Flex user interface in real-time from all the pay stations in the lot.

T2 Handhelds/Hardware

The pay-by-space real-time integration works with all current handhelds in the T2 portfolio including: Motorola-Symbol MC75, Casio IT3000/3100, TDS Recon 200X and the Two Technologies JETT.eye. Of course real-time wireless functionality is required for the integration.

The handheld ticketwriter provides color-coded information, showing which spaces have expired and the time remaining on other spaces. If the officer chooses to issue a citation, the space location and offence information is automatically entered into the citation - saving yet again an additional step.

For enforcement officers, this means increased efficiency and accuracy as they can now rely on real-time information, communicated directly from the pay station, when issuing a citation. For managers, the increased number of violations receiving a citation and fewer appeals produces higher revenues, while audit reporting and activity tracking enables you to measure usage and officer productivity.

Powerful Solutions from the Parking Experts

For more information on how T2 Systems can help you manage your parking more efficiently, call 800-434-1502, or visit us on the web at www.T2systems.com.
