## MEDIA RELEASE

### City of Iowa City Chooses T2 Flex as New Access and Revenue Control Solution

(INDIANAPOLIS, IND.— May 12, 2009) T2 Systems announces that The City of Iowa City has selected the T2 Flex™ parking management system as its new access and revenue control solution for three of its cashiered parking facilities.

The City of Iowa City has been a T2 customer for several years and in September of 2008 it upgraded its legacy system to T2 Flex, coinciding with a restructuring of the citation processing responsibilities within the city. This upgrade was followed closely by the project to replace the access and revenue control systems in three cashiered facilities. After the RFP process, T2 was awarded the contract for the project.

According to Chris O'Brien, Director of Transportation Services for the city, there were several reasons why T2 Flex was chosen, one of which is that the city will now be able to manage all aspects of its operation with just one system.

"The idea of having a system that processes everything related to our parking operation is very appealing," O'Brien said. "Having our permit system in the same software suite as our access and revenue control system is very convenient and has eliminated the need for additional interfaces or duplicate entry of data."

T2 Flex is the industry's only parking system that manages permits, citations and access and revenue-controlled facilities. This gives users the convenience of one system, or data base, which contains all relevant information, making reporting more efficient.

"The ability to produce reports that summarize all of our revenue streams without the need for numerous spreadsheets is very exiting," O'Brien said.

The City of Iowa City is a demonstration of how T2 Flex can meet the needs of a growing and evolving operation. The city was using T2 Flex to manage its citations and is adding the access and revenue functionality. According to O'Brien, this means more efficiency and less re-work.

“During the beginning stages of our access and revenue control project, we have benefitted from working with a company that is familiar with our operations and business practices,” O’Brien said. “And we already know how to use T2 Flex so it’s less downtime and improved efficiency for our operation.”

### **About T2 Flex**

T2 Flex is the newest generation of parking management software. A first in the industry, T2 Flex is a single solution that offers parking management, enforcement, permits, events, as well as access and revenue control. This single system coordinates all aspects of the parking office, providing centralized control, management, reporting and operation of all sub-systems from one portal. It streamlines operational tasks, including accounts receivable, residential and other permits, access cards, citations, towing and monthly contract parking.

T2 Flex is a thin-client solution in which all software and data residing on servers can be securely accessed from any PC with a browser. T2 Flex minimizes duplicate work between various systems and allows parking operations to easily share data with other systems and departments within an organization and with outside vendors.

### **About T2 Systems**

Since 1994, T2 Systems has delivered proven parking solutions that meet the ever-changing needs of the parking industry. This commitment is evident in T2’s quality products and services, thought leadership and strong customer relationships. With its broad range of technology-based solutions, T2 Systems is trusted by more than 300 organizations in the US and Canada including universities, cities, towns, hospitals and airports. T2 Systems is headquartered in Indianapolis, Indiana and has virtual offices throughout the United States and Canada.
