MEDIA RELEASE

New Version of T2 Flex Parking Management System Offers Hosted PARCS Solution

(INDIANAPOLIS, IND.— September 21, 2009) T2 Systems announces the availability of the newest version of its T2 Flex™ parking management system, the industry's only solution that manages permits, citations and access and revenue control in one system. With this new version, T2 can now host the access and revenue control application in addition to permits and enforcement.

When T2 hosts the application, customers benefit from reduced IT spending and maintenance, as well as the knowledge that all system backups and upgrades are handled automatically and in one place - no matter how many facilities you have or where they are located.

T2 customer George Mason University is already using the latest version and is realizing benefits, according to Josh Cantor, Director of Parking and Transportation. "George Mason University made the decision to install access and revenue control for our new 2,650 space parking garage after we found out that T2 would be able to implement a hosted solution where they already hosted other components of T2 Flex for us," Cantor said. "This system has been great for us, allowing more of our staff who work in T2 Flex to look up individual customer transactions without having to log into another system."

Because T2 Flex is a hosted, web-based solution, users have the ability to monitor facility operations from anywhere using a PC with an internet connection. All needed information is accessed in real time without the need for a combination of programs or systems running simultaneously. With T2 Flex, information about all facilities is available from one place, improving efficiency and control and eliminating the need for data entry.

"The ability for a provider to offer hosting services for an access and revenue control application is very unique," said Blake Laufer, VP of Product Development and Chief Technology Officer for T2 Systems. "For those customers who wish to implement the PARCS functionality or the complete enterprise version of T2 Flex, for permits, citations, and access and revenue control, we now can host their entire solution."

The new Device Communication Software (DCS) within T2 Flex makes it possible for T2 to host the access and revenue control application and enables real-time status of equipment - such as gates, credit card entry and exit stations and pay-on-foot stations - in one place, including alerts.

DCS provides real-time device monitoring using the Microsoft Silverlight™ web browser plug-in. Microsoft Silverlight supports .NET languages and development tools. For T2 Flex, Silverlight enables DCS to serve real-time lane information directly to a tab within the T2 Flex Monitoring System.

About T2 Flex

T2 Flex is the newest generation of parking management software. A first in the industry, T2 Flex is a single solution that offers parking management, enforcement, permits, events, as well as access and revenue control. This single system coordinates all aspects of the parking office, providing centralized control, management, reporting and operation of all sub-systems from one portal. It streamlines all operational tasks, including accounts receivable, residential and other permits, access cards, citations, towing and monthly contract parking.

T2 Flex is a thin-client solution in which all software and data residing on servers can be securely accessed from any PC with a browser. T2 Flex minimizes duplicate work between various systems and allows parking operations to easily share data with other systems and departments within an organization and with outside vendors.

About T2 Systems

Since 1994, T2 Systems has delivered proven parking solutions that meet the ever-changing needs of the parking industry. This commitment is evident in T2's quality products and services, thought leadership and strong customer relationships. With its broad range of technology-based solutions, T2 Systems is trusted by more than 300 organizations in the US and Canada including universities, cities, towns, hospitals and airports. T2 Systems is headquartered in Indianapolis, Indiana and has virtual offices throughout the United States and Canada.
