

T2 Flex is a single, unified system for parking management, enforcement, permits, as well as access and revenue control. T2 Flex is the authoritative data source for everything related to parking, providing a unified platform that streamlines all parking tasks including: accounts receivable, residential and other permits, access cards, citations, towing, monthly contract parking, event management, reservations and validations. It allows you to manage any and all parking-related data, providing centralized control, management, reporting and operation of all sub-systems from one portal.

Pay-by-Cell Integration

As today's parkers become more sophisticated, many are using their cell phones to locate and pay for available parking. Pay-by-Cell is a fast-growing payment option and a low-cost addition to a parking operation, requiring no changes to the parking infrastructure. In addition, Pay-by-Cell is also highly desired by parkers, enabling them to quickly pay for parking and receive text messages about the time remaining on their space.

Just like with other parking areas, parking operations enforce Pay-by-Cell areas using a handheld device to "audit" vehicles and license plates. Because parking officers need to know instantly if a vehicle or parking space has been paid for, Pay-by-Cell enforcement is dependent on real-time wireless access to the Internet. Currently, officers can use any wireless-enabled browser to perform a lookup of license plate or space information, however this information doesn't automatically transfer to the citation; the officer must re-enter this same information on a handheld ticketwriter or on a handwritten ticket.

T2 Systems has integrated with several Pay-by-Cell vendors - including Verrus and Parkmobile - to offer an easy enforcement solution that allows officers to move effortlessly from the information provided in the Pay-by-Cell application directly to citation issuance – saving valuable time and helping collect additional revenue. This new feature integrates seamlessly with T2's handheld citation process so officers can enforce Pay-by-Cell spaces without using a secondary device to perform lookups. All lookups are integrated within the T2 handheld and populate directly into our current Pay-by-Cell application without any additional keystrokes.

How Does It Work?

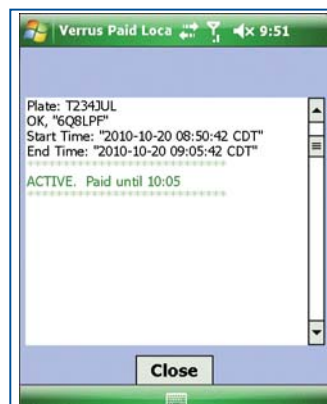

This new feature is specifically for parking operations – such as university campuses, municipalities, hospitals and medical facilities, or private operator managed operations - that offer, or are interested in offering Pay-by-Cell technology to their patrons. Pay-by-Cell service allows parkers to pay for their parking fees via their phone as long as they set-up a personal account (registering a vehicle, cell phone number and credit card for payment) in advance of using this payment option.

Using a wireless internet connection, the handheld connects to the Pay-by-Cell provider's server to retrieve real-time data about Pay-by-Cell payments, helping an enforcement officer determine which meters and stalls have been paid for by parkers using a cell phone or smart phone application.

This grid view displays all parking rights associated with multi-space off-street locations and can integrate directly with Digital Payment Technologies Pay-by-Space operations.

Both Verrus and Parkmobile Pay-by-Cell integrations provide a view of individual parking rights, including start and expiration times, all within the T2 handheld enforcement application.

Eliminating the need to enter data before being informed of paid spaces, the officer simply selects the appropriate zone and refreshes the application screen. For each zone selected, the handheld automatically retrieves current parking information from the server. The handheld quickly presents information about the plate and or space, and the application then provides a graphic display of all space numbers or license plates that are in various stages such as: active, overtime, paid, expiring, or expired status. From here the officer can choose to write a parking ticket for expired payments or return to the menu.

Now with an easier enforcement process, parking officers will no longer miss out on revenue from citations or unpaid parking fees. This efficiency, along with the important statistical information available about parking locations, durations, and demand, make Pay-by-Cell a popular, cost-effective solution.

Powerful Parking Solutions from Parking Experts

Since 1994, T2 Systems has delivered proven parking solutions that meet the ever-changing needs of the parking industry. This commitment is demonstrated in T2's quality products and services, thought leadership and strong customer relationships. With its broad range of software, hardware, management and technology services, T2 Systems is trusted by more than 350 organizations in the US and Canada including universities, cities, towns, hospitals, private operators and airports.
