

T2 Flex is a single, unified system for parking management, enforcement, permits, as well as access and revenue control. T2 Flex is the authoritative data source for everything related to parking, providing a unified platform that streamlines a myriad of parking tasks including: accounts receivable, residential and other permits, access cards, citations, towing, monthly contract parking, and much more. It allows you to manage any and all parking-related data, providing centralized control, management, reporting and operation of all sub-systems from one "portal".

A Hosted Parking Management Platform

T2 Systems' unified parking management solution, T2 Flex, is a hosted management platform. Since T2 Flex resides on a Web server, you can securely access the application and the database from any computer with a Web browser. This is easy and convenient for you because there's no significant software installation on the workstation; you login from your Web browser and begin using T2 Flex.

Hosting Options

T2 offers customers the flexibility to choose how they want to manage their solution. Your organization may want to host T2 Flex and manage all associated IT resources, such as the servers and other related hardware. Or you can have T2 host the solution for you - whichever best suits your operation.

T2 Hosting Benefits

When T2 hosts Flex, you can focus on managing your parking operation and leave the IT management and administration to us. Your IT operation can focus on other projects instead of spending time and resources on system set-up and ongoing maintenance. In addition, you'll reduce the total cost of ownership because you won't have to invest in additional hardware, or budget for ongoing maintenance and future technology requirements.

When T2 hosts, you'll get faster deployment because we take care of system administration, server equipment, database maintenance and upgrades. You'll always have the latest software version and you'll always own your own data. In addition, data backups, scheduled virus scans, and system maintenance are included. Additional management options are available with T2 Enhanced Support. All of this with one vendor - making everything easier for you.

Secure Access from Anywhere

When T2 hosts T2 Flex, you can securely and safely access the system from any computer connected to the Internet using Microsoft Internet Explorer 6.0 from your office, another department, or your home. The system is password protected and has an active firewall. SSL encryption ensures data remains secure during transfer over the Internet.

T2's Hosting Environment

T2 Systems has selected nFrame, a proven hosting facility with clients that include Monster.com and The Finish Line. A member of the Continental Broadband national family of managed data network service companies, nFrame is home to IndyX, a national Internet backbone provider, and is a highly-secure environment that includes:

- Biometric hand scanners
- Closed circuit video
- 24 hour on-site security staff
- Specially issued card keys

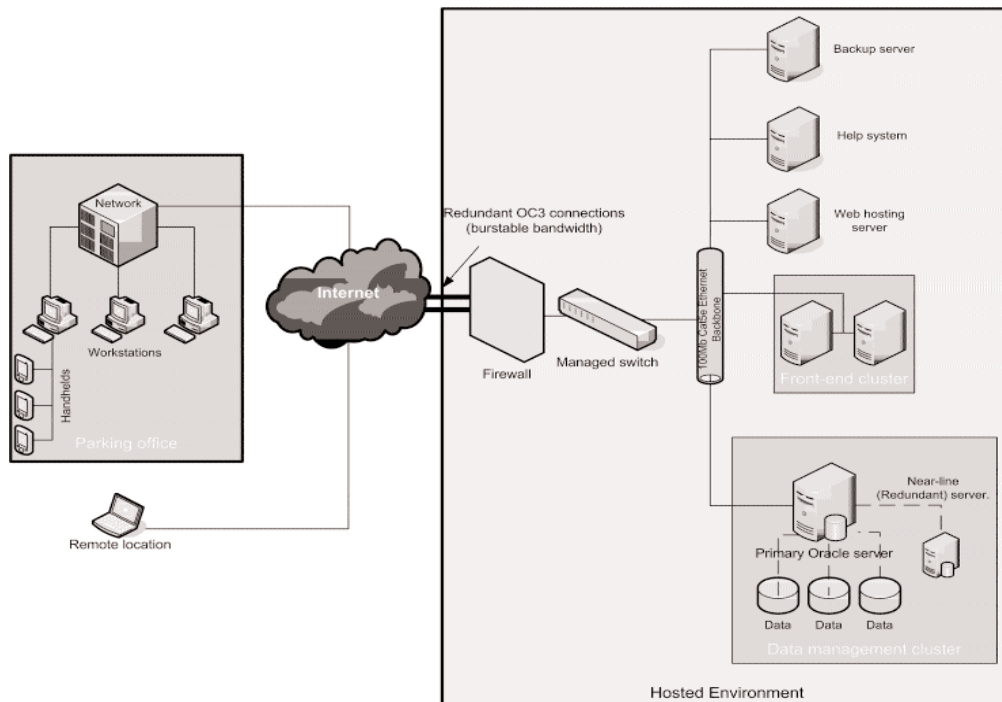

nFrame has passed a thorough operational facilities audit (report available on request), ensuring that your data is always safe and always available. And of course T2 uses high performance hardware and software to keep your parking data secure.

- Windows 2003 Enterprise Server, the most stable and secure Microsoft operating system, provides network load balancing across multiple servers. This means during busy times you get guaranteed performance since multiple servers share the load of network traffic.
- Modern, rack-mounted servers with dual power supplies and network connections are redundant and failover ready. If one server drops out of the farm, then another takes its place.
- High speed switching hardware gives you increased network speed and reliability along with network monitoring and error correction.
- All systems are constantly monitored for viruses and malicious script activity. Virus definition files are automatically updated every day, protecting against viruses from the Internet, as well as files or attachments users might upload inadvertently to the server. This keeps your hosted data safe.
- A layered approach to security gives you maximum protection. All data is encrypted for transmission using SSL certificates, while firewalls are employed to keep out prying eyes.
- Daily "differential" data backups are streamed to a near line network attached storage server. Hot backups are performed throughout the day. Weekly "full" backups are secured in airtight, high impact containers and held offsite for added data security.

In June 2006, T2 Expanded its Presence and Upgraded Equipment

These upgrades include:

- 4 load balanced and redundant 20 amp circuits running to our servers
- 2 independent 10MB (minimum) uplinks to IndyNet
- More cooling capacity
- Room for up to 30 new servers, and a brand new Dell 6800 server with Dual Core 3GHZ Xeon processors
- Over 200GB of drive space, and 24GB of ram!
- Two near line flex servers in the racks for failover that can be activated in minutes and a presentation level layout for customer walkthroughs.

Self-Hosting Benefits

T2 designs its solutions with its customers' needs in mind. T2 Flex is no exception - it's flexible enough that your organization can host it as well. We understand that you may want to have complete control over where your data is housed, so we provide a thorough checklist of the technical requirements for hosting your parking management solution. Of course the T2 parking experts are deeply involved in the installation process and are available to help ensure your resources support your solution.

Minimal Requirements

* T2 provides this component
 ** This component is available for free download from the Internet
 *** T2 can provide, but Oracle licensing and software maintenance not included in T2 Flex monthly subscription fee

	Server(s)			Client Workstations				
	Application & Credit Card Server <small>Assuming 1,000 daily credit card transactions</small>	Device Communication Software Server per 50 lanes	Database Server	Standard Workstation	Point-of-Sale Workstation	Report-Building Workstation	Handheld Workstation	
HARDWARE	Processor (minimum / recommended)	2 GHz / dual 3 GHz	2 GHz / dual 3 GHz	P-III 1 GHz / dual 3.0 GHz	333MHz	333MHz	P-III	333MHz

	Adobe PDF Viewer (or equivalent)**				✓	✓		
	Device Communication Software*		✓					
	HCS (Handheld Communications Software)*							✓

If all minimum hardware and software requirements are met, Client Workstation configurations can be combined into a single, multi-purpose workstation.

For a production environment, it is NOT recommended to run the Application Server and Database Server on the same machine. The disk space requirements for each server will vary with the amount of data stored. Additional processors for the Application Server or Database Server may affect licensing.

If your organization currently owns an Enterprise Oracle license acquired outside of T2 Systems, you may be able to use it for T2 Flex. If your organization runs PowerPark v. 3.xx, the Oracle license is valid for T2 Flex. You will need to continue paying Oracle software maintenance.

T2 Flex is compatible with Oracle 10g.

For more information on how T2 Systems can help you better manage your parking operation visit us on the Web at www.t2systems.com, or call 800-434-1502.
